IC-NMAA '24

1st International Conference on Nonlinear Mathematical Analysis and its Applications

This conference aims to unite senior and junior researchers, creating a platform for them to showcase their advanced research results, significant developments, and practical applications across many areas of Mathematical Sciences. Moreover, this first international event is an oppotunity which allow attendees to develop new collaborations.

The event will take place on

May 14-15,2024

Topics of the conference:
- Differential equations and dynamical systems.
- Partial differential equations and functional analysis
- Algebra, number theory and geometry
- Operational research and optimization
- Modeling and Control
- Physical Mathematics
- Probability statistics
